THE ONLY TRUE UNPROCESSED SURROUND SOUND HEADPHONE, PERIOD!

FORGET EVERYTHING YOU THINK YOU KNOW! ABOUT GAMING HEADSETS AND THE WAY THEY WORK

PsykoWave™ technology delivers the highest level of audio directionality and natural sound reproduction over any other 5.1 or 7.1 surround sound gaming headset. This is achieved through a radical design departure from traditional surround sound headsets. Instead of using signal processing to simulate surround effects:

-  Five speakers are placed in the bridge of the headphone each in a precise location to create the correct timing and level differences to both ears.
-  Dual precision-tuned audio waveguides direct the sound from all speakers to flow past the front and rear of both ears, creating the same audio environment that exists with a 5.1 room speaker system.
-  To complete the 5.1 surround sound experience, sub-woofers are placed in each ear cup to deliver the most dynamic a audio gaming experience.

INCREASE YOUR K/D

Absolutely accurate **positional awareness**, you can close your eyes and know where the sound is coming from (e.i. foot steps, players reloading, etc.) You'll be ready, long before your opponent realizes it's game over for them.

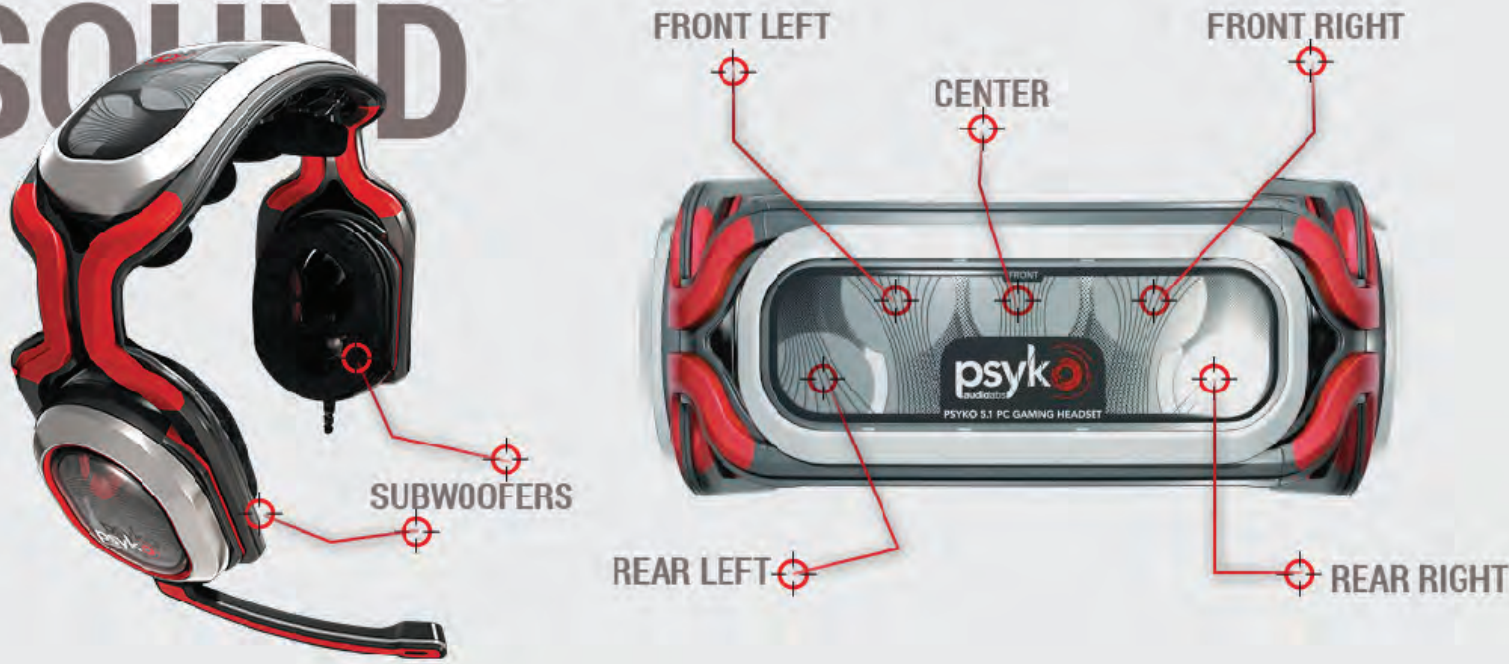

DON'T BE A SCRUB

Don't be that scrub who continuously gets destroyed each match. Let Psyko Audio™ take you from the bottom of the leaderboards to the top, game after game! Just don't tell them you have advanced audio weaponry at your disposal.

GET THE LATEST IN PATENTED AUDIO TECHNOLOGY FROM THESE RETAILERS:

5.1 SURROUND SOUND

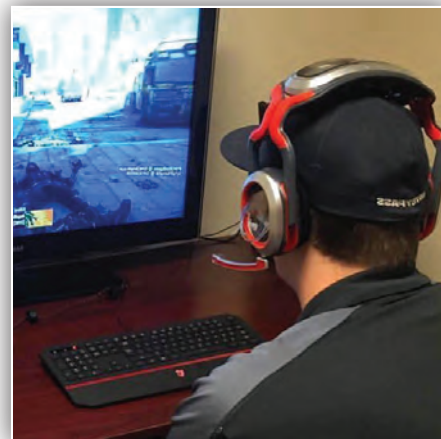

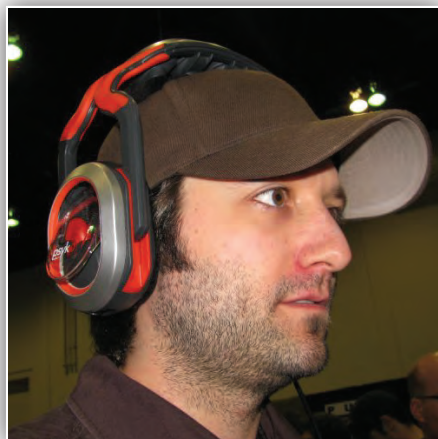

- PC COMPATIBLE:** Designed exclusively for the PC. We also include everything you need to play on your favorite console.
- 5.1/7.1 SURROUND SOUND:** Five individual speakers in the bridge of the headset to recreate the perfect room.
- INSTANT POSITIONAL AWARENESS:** Precision audio waveguides naturally drive the sound to both ears with zero latency.
- PSYKO AMP:** Fully adjustable bass, volume control, and 5 LED visual direction indicators.
- REMOVABLE MIC:** There when you need it, but out of the way when you don't.
- PIVOT EAR CUPS:** Pivot-open ear cups keep your ears cool during extended play, also allows you to hear others.

REVIEWS

"Hard to say anything but awesome things about this headset, its done me wonders in causing other players in games to quit in fits of rage. Profanities, curses, and accusations of hacking seem to occur quite often, especially when they think they are sneaking up on you from behind, only for you to hear them coming, turn around, and then knife them in the chest before they realize it." - Verified Review

"The best headphones I've purchased to date. Amazing directional audio. Compared to simulated (emulated) surround sound headphones like Turtle Beach and Astro, these blow them out of the water. Can't wait to see what the future holds for Psyko Audio." - Verified Review

Each ear cup contains a sub-woofer. Low frequencies are not directional.

A precise location in the wave-guide for each speaker to represent a specific location of each speaker in a room. It's like having a full subversive surround sound experience, similar to a home theater on your head.

Other headphones companies rely on two speakers to simulate surround sound, which leaves you with an un-natural and disconnected audio experience. Psyko Audio headphones have 5 speakers on the bridge total. The (2) front, (2) rear and (1) center speaker sounds flow along wave guides (highlighted in red to the left) to produce precise timing & volume differences.

Unlike the virtual methods, the Psykowave technology has no latency, a pinna effect unique to each person and the transition from one position to another requires no interpolation functions. In fact the Psykowave technology is exactly like a room speaker system, where the sound moves smoothly to each position

The Psyko 5.1 headset system is truly plug and play, there is no need to install, download, or update any Psyko software drivers. The Psyko hardware does it all. Simply plug the 3.5mm jacks into the matching ports on your sound card and you're set!

Enclosed, fuzzy headphones tend to make my head sweat after extended use. Fortunately, the Psykos have optional ventilation ear cups.

The amplifier has different features to improve the user experience. First, there are six LED lights on the front to let you know when the amp is powered on and when the individual speakers are active. The reasoning for this is to give visual feedback that the headphones are working properly. There is also a bass and volume level knob as well for exact tuning.

THE BENEFITS OF GAMING WITH PSYKO AUDIO™

- Improved reaction times, in game
- You can selectively listen to each even occurring around you
- The sound experience is audible and intelligible w/out the need to blast your volume high

ADVANCED AUDIO WEAPONRY

- Plug and play with easy setup
- Ideal for gaming, especially FPS
- Excellent and realistic surround sound
- Accurate positional awareness
- Reduced In-The-Head Fatigue
- Visual experience is enhanced

WHY CAN'T YOU POWER THEM THROUGH USB OR 3.5 JACK?

Competitors who generate simulated surround sound are able to power their headsets off of a 3.5mm port or USB because they are only delivering the audio to 2 speakers. Psyko Headsets have 7 speakers total, 5 in the bridge and 2 sub-woofers in the ears which require more power to drive all those channels for True 5.1/7.1 Surround Sound.

DO YOU HAVE A CONSOLE VERSION OF THE HEADSET?

Yes, we are releasing the Psyko 5.1/7.1 Console Gaming Headset that is compatible with the Xbox One and PlayStation 4 gaming consoles. We do not have an exact release date, we're looking at Summer 2017. Psyko 5.1/7.1 Console Gaming Headsets are completed and ready for mass production with a few changes!

WHY ARE THE HEADSETS SO HEAVY?

This goes back to having (7) speakers in the headset total. (5) of which are located on the headsets bridge which can add a little bit of extra weight. We've offset that by adding (5) high quality foam pads to the bridge of the headset. 2 speaker headsets are light, but also don't distribute True 5.1/7.1 Surround Sound to your ears.

IS THERE A BREAK IN PERIOD FOR THE HEADSET?

You're new Psyko headphones uses seven state of the art electromechanical transducers to reproduce any gaming audio with incredible positional accuracy. We recommend using your new Psyko headphones for 24 hours before truly accessing their incredible audio qualities and unlocking bone jarring explosions!

ARE THE HEADSETS PORTABLE?

Psyko Audio 5.1/7.1 Surround Sound Headsets were designed to work directly with a custom gaming PC that is equipped with dedicated sound card. While they are not meant for easy portability... You could always unhook your entire gaming setup and transport that, along with the headset to wherever you are going.

WHAT HAPPENED TO THE PSYKO CARBON MODEL?

They were replaced by the New Psyko 5.1/7.1 Surround Sound Headset, which is a combination of the old Krypton and Carbon headset. The new Psyko headset uses all the components of the Carbon headset: Gold Plated Connectors, Tangle Free Braided Cable, High Performance Speakers and a new upgraded Psyko Amp.

WHERE CAN I BUY PSYKO 5.1/7.1 HEADSETS?

We sell directly from our main website and a few third party markets including Amazon, eBay, NewEgg and Sears. If you would like to order, please visit our online store at www.PsykoHeadsets.com and click the shop.

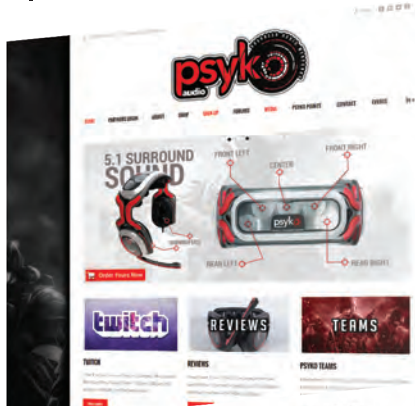

DO YOU HAVE PLANS FOR A WIRELESS VERSION?

Yes - Development Planned.

Product Description:

If you're a first person shooter, RPG or MMO enthusiast, experience the ultimate in gaming gear; the Psyko 5.1 PC gaming headset. Psyko 5.1s are the first true surround sound speaker system built into a gaming headset. The result is revolutionary. Experience every sound detail from all directions, increasing your reaction times and giving you the edge. Our award winning and patented Psykowave technology places speakers more accurately than many room systems. You hear more game detail and experience greater positional awareness than ever before.

Product Features:

- Five individual Speakers in the bridge of the headset – recreating the perfect room so you are always in the audio sweet spot.
- Precision Waveguides – naturally drive the sound to your ears
- No Digital Sound Processing – Zero latency and instant positional awareness
- Pivoting ear cups - lets you hear others without removing the headset, and keeps your ears cool
- Simple Setup – no software drivers, they just plug in, just like a home theatre but easier
- Removable boom Mic – out of the way, but there when you need it

Technical Specifications:

Headphones

- Freq. response:
- Low freq transducers - 50-150 Hz
- Impedance: 120 Ohm
- Sensitivity: 105 db +- 1db
- High freq transducers - 150 -20,000 Hz
- Impedance: 30 Ohm
- Sensitivity: 102 db +- 4db

- Cable: 1.8m + 1.8m = 3.6 m
- Jack: 3.5mm
- Single Weight without packaging: 1.27 kg

Microphone

- Freq. response: 100 Hz - 16 KHz
- Sensitivity: -45 dB +- 1 db
- Pattern: Omnidirectional

- Availability: Now
- Part Number/SKU: PAPC51V3
- UPC Code: 856999005041
